

Introduction to Generative AI with AWS
Project Documentation Report

Visit [UDACITY Introduction to Generative AI with AWS Project Documentation Report](#) to make a copy of this document.

Complete the answers to the questions below to complete your project report. Create a PDF of the completed document and submit the PDF with your project.

Question	Your answer:
Step 2: Domain Choice What domain did you choose to fine-tune the Meta Llama 2 7B model on? Choices: <ol style="list-style-type: none">1. Financial2. Healthcare3. IT	Financial
Step 3: Model Evaluation Section What was the response of the model to your domain-specific input in the model_evaluation.ipynb file?	The investment tests performed indicate > that the proposed system is able to effectively predict the stock price movements. Keywords: stock price prediction, financial time series prediction, artificial neural networks, support vector machines, back propagation neural networks, support vector machines, extreme learning machine, financial time series prediction, artificial neural networks, support vector machines, back propag
Step 4: Fine-Tuning Section After fine-tuning the model, what was the response of the model to your domain-specific input in the model_finetuning.ipynb file?	the relative volume for the long out of the money options, indicates > [{"generated_text": " that the long out of the money options are being sold more often than they are being bought.\n\nThe relative volume for the short out of the money options, indicates that the short out of the money options are being bought more

	often than they are being sold.\n\nThe relative volume for the long in the money options,']]
